

LIMISERVO X G SERIES

LIMISERVO X G SERIES

COMPACT, LIGHTWEIGHT MOTOR
WITH COMPLETE RANGE OF
CONVENIENT FUNCTIONS!

NEW

● **Motor Size and weight reduction**

Motor weight reduced by approximately 1.7 kg for a total weight of 10.5 kg

● **Enhanced Functionality**

- Computer Interface Standard Equipment

- Compatibility with the options of the previous serie.

- "Step Sequence Function" : This function enables easy programming of the desired input, output and machining operations in sequence with the stitching process. (Extensive upgrade of existing F series simple sequence mode). Various operations can now be incorporated into the "stitching process", including those performed before and after operation.

- Direct parameter No. Call-up function : Previously it was necessary to select the respective mode to perform settings when making changes to the parameters, however, by using the G10 or G500 control panel, it is now possible to call up the required parameter directly. It is also possible to call up parameters for each mode.

● **Multi-Function, Interchangeability**

- Full Functionality : The G Series retains all the operability and multi-functionality of the XC-F Series! The control box uses the same connectors as the XC-F Series, enabling easy connection.

The settings data save function has been expanded to enable saving of settings data from 1 model to 2 models. A parameter change difference display has been added. (A flashing dot (.) displays at the changed parameter), 2 types of function setting can now be performed with a single input.

- Interchangeability : The XC-KE-01P detector, XC-FM-1, XC-FM-2, and LE-FA presser foot lifter units, and XC-CVS-2 variable speed pedal can all be used as is. The existing XL-554 motor can be used with an optional attachment bracket.

- Control Panel : XC-G10 and XC-G500 Series control panels are available. XC-G10 Series can be attached to and removed from the control box. Significant enhancements have been made to the operability of the XC-G500 Series control panel over existing functionality (XC-E500), and the settings data memory has been doubled.
